Enable Time Clock POS Setting

This setting allows you to designate a specific device to be used for all clock in and clock out activity. Enabling time clock on just one of your devices reduces duplicate time punches by ensuring that employees will be warned of any duplicate clock ins/outs and unpaired punches even if the POS is offline. For any device where Time Clock is not enabled, the Clock In and Clock Out buttons on the login screen will be not be displayed.

To select whether Time Clock is enabled on a device:

1. From the POS **Home** screen, tap 🔧 to display the **Settings** screen.

2. Scroll down to the **Time Clock** section.

3. Slide the **ON/OFF** slider to:

   - **ON** -- to enable time clock and display the Clock In and Clock Out buttons on the login screen (default)
   - **OFF** – to disable time clock and not show the Clock In and Clock Out buttons on the login screen

4. Tap **Close**.

Close   **Settings**   Help   Logout

Reminds you to assign a customer to a ticket before checkout is complete

Table/Tag Assignment   None   >

Allows you to assign a table or custom tag to each ticket

Require PIN entry

Sets whether or not the device requires users to enter their PIN each time a transaction is started
